EXTERIOR FEATURES OF NOTE (continued from page 1):

Starr and Leadley of Camden, New Jersey. The main (west) elevation has a small bay near north elevation with an entrance on the ground floor. Extensive use of glass, in the form of windows, almost gives the building an impression as a glass structure. Sheet metal is used on the cornice at the sixth floor line. Windows on the roof are triple dormers. The roof of the small bay contains a oval window with a pair of pilasters and an arched lintel. This window is a typical example of a 19th century mansard roof window.
